E'Nauwi Beach Resort Actual rankings & SEO release

1 November 2026 | Google mobile | English | Vanuatu, Australia, New Zealand

www.enauwibeachresort.org

The brand ranks; broader booking searches have room to grow.

The live baseline shows the home page at organic #1 for "enauwi beach resort" in Vanuatu and Australia. In New Zealand the best matching result is #5, using the directions article. Accommodation and activity terms often rank a supporting page instead of their intended booking or activity page.

Query	Vanuatu	Australia	New Zealand
enauwi beach resort	1 - home	1 - home	5 - article
beachfront bungalows efate	Error	31 - home	Not found
corporate retreat vanuatu	Not found	5 - article	Not found
kayaking efate	29 - blog	10 - blog	31 - activities

Release status: READY - live verification passed

Approved work covers server-visible accommodation, restaurant and services content; distinct page metadata; correct Efate location text; relevant breadcrumbs/structured data; useful FAQs/internal links; and labelled activity controls. No new articles, profile posts, speculative redirects or recurring jobs were published.

Booking availability needs attention

Before release, the live site and local build both had 16 room records with none marked available. Public searches therefore returned no room options. This is an existing inventory setting, separate from the SEO changes. Stephen explicitly requested that room availability remain unchanged.

Scope and honesty

Thirty queries were checked in each of three countries: 85 successful responses and five search-engine failures after one retry. Search volume is available for some Australian/New Zealand queries; Vanuatu keyword volume is unsupported. Total provider-reported research cost: US$1.2531.

These positions are the pre-release baseline, not results caused by today's SEO changes. Positions vary with country, device and time. No position or time to rank is guaranteed.

Every observed ranking

Organic positions exclude ads. The best matching resort URL is listed below. Existing articles retain their headlines and body content; metadata and internal navigation were improved without deleting indexed URLs.

Market	Exact query	Pos.	Ranking page
VU	enauwi beach resort	1	/
VU	e'nauwi beach resort	1	/
VU	family accommodation efate	25	/
VU	snorkeling efate	32	/activities
VU	kayaking efate	29	/blog
AU	enauwi beach resort	1	/
AU	beachfront bungalows efate	31	/
AU	corporate retreat vanuatu	5	/blog/planning-a-conference-or-corporate-retreat-in-vanuatu
AU	snorkeling efate	47	/activities
AU	kayaking efate	10	/blog
NZ	enauwi beach resort	5	/blog/how-to-get-to-enauwi-from-port-vila
NZ	family activities efate	22	/activities
NZ	kayaking efate	31	/activities

What the mismatches tell us

The home page currently wins the observed bungalow/family accommodation queries. /blog wins kayaking queries in Vanuatu and Australia. /activities wins the observed snorkelling queries. Better owner-page content and descriptive internal links give Google clearer destinations for those intents. This is an opportunity, not proof of cannibalization.

The New Zealand brand result is a directions article. Check country-specific brand queries and search-owner account data after recrawling; do not redirect or delete that article simply because it ranks first among the resort's results.

The complete 30-query baseline

Each cell is a Google mobile organic position. NF = domain not found in the organic results returned. ERR = search-engine failure after one retry; no ranking can be inferred.

Exact query	Vanuatu	Australia	NZ
enauwi beach resort	1	1	5
e'nauwi beach resort	1	NF	NF
enauwi resort vanuatu	NF	NF	NF
family beach resort efate	ERR	NF	NF
family resort vanuatu	NF	NF	NF
family friendly resort vanuatu	NF	NF	NF
beach resort efate	NF	ERR	NF
efate accommodation	NF	NF	NF
vanuatu beach resort	NF	NF	NF
beachfront bungalows efate	ERR	31	NF
beachfront accommodation vanuatu	NF	NF	NF
family accommodation efate	25	NF	NF
eratap accommodation	NF	NF	NF
bungalows vanuatu	NF	NF	NF
beachfront restaurant efate	NF	NF	NF
restaurant eratap	NF	NF	NF
seafood restaurant efate	NF	NF	NF
conference venue efate	NF	ERR	NF
conference room vanuatu	ERR	NF	NF
corporate retreat vanuatu	NF	5	NF
things to do on efate	NF	NF	NF
family activities efate	NF	NF	22
snorkelling efate	NF	NF	NF
snorkeling efate	32	47	NF
island hopping efate	NF	NF	NF
kayaking efate	29	10	31
sport fishing efate	NF	NF	NF
vanuatu cooking class	NF	NF	NF
efate travel guide	NF	NF	NF
best time to visit vanuatu	NF	NF	NF

Depth requested: 100. Actual organic counts and maximum returned ranks vary by query and are recorded in the full export. NF does not mean position 101, zero or absent from the top 100. Timestamps, country codes, task IDs, URLs and raw response references are in docs/seo/rankings.csv.

SEO changes and measured demand

The strongest technical change is useful content before JavaScript loads.

Page	Before: visible words	After: visible words
/book	9	322
/services	8	267
/menu	23	254

Implemented scope

Reviewed titles/descriptions for all 37 existing public URLs; server-rendered core headings and introductions; 16 visible FAQ answers; descriptive links; page and breadcrumb markup; Efate image/heading accuracy; and accessible gallery selectors. Unsupported hard-coded booking ratings and testimonial display were removed. Existing booking calculations, APIs, slugs and database schema were preserved.

Demand estimates: monthly searches by searcher country

Keyword	Australia	New Zealand
family resort vanuatu	210	20
vanuatu family holiday	260	20
snorkelling vanuatu	320	50
things to do on efate	70	unavailable
best time to visit vanuatu	2900	210
vanuatu travel guide	170	30

Volumes are provider estimates, not this site's traffic or bookings. Numeric volume was returned for 18 of 126 candidates in Australia and 8 in New Zealand. Missing data remains unavailable, not zero. The keyword database does not support Vanuatu. A reported difficulty of zero does not guarantee an easy ranking.

Verification and next priorities

Release record

Status: READY - live verification passed
Website: https://www.enauwibeachresort.org/
Source commit: becbbe1cddc3571403dcfdb39080cc5c2efc6684
Deployment: dpl_DnUzGEeBZ3RAXACtCFfFqJ7L7Ygq

Public re-audit: 37 URLs. Raw checklist scores: technical 100, on page 100, content 87, measurement 100, overall 97. These are automated checklist scores, not Google rankings or analytics verification.

Acceptance checks

Production build/typecheck/lint passed. Nineteen live no-JavaScript/desktop/mobile observations passed with zero browser errors or guest writes. All 37 sitemap URLs return successfully. Verification file, robots/sitemap, private-page noindex, genuine 404 and legacy-host 308 checked. Real room inventory remains unavailable on Stephen's explicit instruction; booking modal checked separately with a browser-only labelled fixture.

Existing inventory setting - unchanged by instruction

Room selection was tested separately with a labelled browser-only fixture because real public inventory is empty. No fixture was saved or published and no booking/order/enquiry was submitted. See room-availability-baseline.json for the matching live/local counts. Stephen instructed that availability remain unchanged.

What is still outside this release

Search-owner account coverage/query review; analytics event delivery and booking conversions; exact map pin and local profile manager access; conference opening/capacity; current activity operators and locations; transfer and breakfast terms; and a successful mobile speed test. No new operating facts or wildlife sightings are promised.

Recommended next steps

1. Inspect the updated money pages in the search-owner account and request recrawling where appropriate. Recheck the same query/country/device baseline after indexing.

2. Confirm conference and activity facts before expanding promotion; finish the exact business location/profile details.

3. Verify completed-booking and enquiry conversion events, then prioritize content using actual demand, queries and qualified leads.

4. Review overlapping guides with traffic/query evidence before merging or redirecting. Keep future articles as drafts until approved.

Evidence and measurement method

Full rankings: docs/seo/rankings.csv
Raw tasks and timestamps: docs/seo/research/measured-2026-11-01/
Keyword metrics: docs/seo/keywords.json and keyword-demand.md
Change log and verification: docs/seo/implementation.md and verification.md
SERP method: https://docs.dataforseo.com/v3/serp-se-type-live-advanced/

Historical keyword-index lookups returned no ranked-keyword records for AU/NZ. The live observations in this report are distinct from that database and establish the actual baseline. No historical-index absence was treated as zero rankings.
