PACIFIC WAVE DIGITAL / WEBSITE GROWTH REVIEW

E'Nauwi Beach Resort SEO review & keyword plan

1 November 2026 | Baseline review and approval package

www.enauwibeachresort.org

37 URLs	126 phrases	37 page drafts
Entire public sitemap checked	Keyword candidates grouped by intent	Titles and descriptions prepared

The priority is the booking journey

The site has working public pages, canonical URLs, a sitemap and business markup. The clearest improvement is to make accommodation and service information visible in the first page response, then align the main pages with useful search phrases.

Three decisions that matter

- Approve the first release: booking/services visibility, clear page metadata, accurate location wording, useful internal links and relevant structured data.

- Confirm current conference facilities, activity availability and the exact resort location before expanding promotional content.

- Restore keyword measurement access and review search and booking-conversion data before choosing growth targets.

Prepared, not published

This package contains the audit, keyword map and exact draft copy. The website source, database and production deployment have not been changed. All search-volume and exact-ranking metrics remain unmeasured.

No ranking position or time to rank is guaranteed.

What the audit confirmed

Area	Finding and significance
Booking page	Only 9 visible words and no H1 in initial HTML. The page depends heavily on JavaScript for useful accommodation content.
Services page	Only 8 visible words and no H1 in initial HTML. Render confirmed conference/service information before client-side loading.
Restaurant page	23 visible words in initial HTML. Add useful restaurant and menu context while live dishes load.
Geography	Homepage hero image says Malekula Island; the resort is on Efate. Correct the alternative text.
Metadata	20 titles exceed 60 characters; 8 descriptions exceed 160. Concise drafts are prepared for all 37 URLs.
Content and controls	Related travel topics overlap. Gallery thumbnail buttons lack explicit accessible names. Inspect search queries before merging articles.

What already works

All 37 sitemap pages returned successfully. Preferred HTTPS host redirects and canonical URLs are present. A deliberately missing page returns 404. The home page contains Resort and WebSite markup, the analytics tag is present, and the public search-verification file returns successfully.

Correcting the automated interpretation

The crawler falsely warned that homepage business markup was missing: the existing Resort type is valid. Thin initial HTML is a rendering dependency, not proof that Google cannot index a page. Empty alt text on decorative thumbnails is acceptable when their controls have meaningful labels.

Raw checklist scores

Technical 100 | On-page 96 | Content 86 | Measurement 100 | Overall 96. These are raw automated checklist scores, not Google scores or ranking predictions. Measurement reflects tag detection only. Mobile speed was not measured because the test service returned a quota error. No improved score is claimed.

Keywords mapped to real pages

126 candidate phrases in 16 intent groups. Each group has an owner page; variations support that page instead of generating repetitive location pages. The commercial priority is accommodation, followed by dining and confirmed group services.

Owner page	Primary candidate	Supporting intent
/	family beach resort Efate	Vanuatu family stays; brand; lagoon setting
/book	beachfront bungalows Efate	One- and two-bedroom stays; family accommodation
/menu	beachfront restaurant Efate	Menu; lagoon dining; Eratap dining
/services	conference venue Efate	Meetings; workshops; corporate groups
/activities	things to do on Efate	Family activities and island experiences
Activity detail pages	snorkelling / kayaking / island hopping Efate	One activity intent per existing page
/blog and existing guides	Efate travel guide	Arrival advice; family stays; seasonal planning

How to use this set

- Use one primary intent in each page title, main heading and introduction; add supporting phrases where they help guests.

- Give the booking page useful accommodation content and links from the guides. Keep current URLs and canonical addresses.

- Treat a weddings page as a later proposal, conditional on venue facts and demand. Do not add location pages for places the resort does not serve.

Measurement limitation

The keyword research account returned an authentication error. Search volume, difficulty, advertising costs, exact Google positions and SERP-based clustering are not measured. Candidates are based on business relevance, first-party content and public-search review. Australia, New Zealand and Vanuatu are proposed research markets.

Public search returned the official site and articles, demonstrating discoverability in the service used. This is not a verified Google country/device rank baseline.

Core page copy ready for review

/

Family Beach Resort on Efate | E'Nauwi Beach Resort

Stay at E'Nauwi Beach Resort on Efate, Vanuatu. Explore beachfront bungalows, lagoon kayaking and family stays. Check availability.

/book

Beachfront Bungalows Efate | E'Nauwi Beach Resort

Book beachfront and lagoon-view bungalows on Efate, Vanuatu. Compare one- and two-bedroom options at E'Nauwi Beach Resort and check availability.

/menu

/services

Conference Venue on Efate | E'Nauwi Beach Resort

Explore conference and guest services at E'Nauwi Beach Resort on Efate, Vanuatu. Contact the team for current availability and a tailored quote.

/activities

Things to Do on Efate | E'Nauwi Beach Resort

Explore things to do on Efate from E'Nauwi Beach Resort, including kayaking, snorkelling and island activities. Enquire about current availability.

/blog

Efate & Vanuatu Travel Guides | E'Nauwi Beach Resort

Plan your Efate holiday with E'Nauwi Beach Resort's Vanuatu travel guides. Explore accommodation tips, island activities and practical trip advice.

Beyond metadata

The supporting files include headings and introductions for six core pages and 16 FAQ answers for booking, dining, services and activities. These should appear as useful visible content, with descriptive links to related pages and the enquiry or booking action.

Character limits are editorial targets. Search engines may choose different titles or snippets. Avoid keyword stuffing and do not promote unconfirmed services.

The recommended first release

1. Render useful content first

Make accommodation and services content available before JavaScript loading; retain the interactive forms. Keep a single main heading in each visible page state.

2. Apply the reviewed keyword map

Use the 37 metadata drafts; add useful core introductions, links and reviewed FAQs. Preserve current URLs. Shorter article search titles must not blindly truncate article headlines.

3. Correct location and accessibility

Change the wrong-island hero description to Efate. Confirm the exact Eratap locality and map pin. Label gallery controls so assistive technology can identify them.

4. Add meaningful structured data

Keep the current resort graph. Add breadcrumbs and page/service information where visible content supports them. No invented prices, ratings, reviews or coordinates.

5. Verify, then release

Check types, lint, production build, rendered HTML and browser flows; check mobile layouts, canonical URLs and the verification file. Commit and push before deployment, then repeat the crawl.

Release scope and later work

The first release covers the existing core pages and shared SEO surfaces. New wedding pages, article publication, article merges/redirects, external profile changes and recurring jobs require their own review. No automated schedule has been created.

Approval boundary

Approve items 1-6 of the detailed fix plan for implementation and a verified deployment. Access-dependent measurement and unconfirmed operational claims remain separate prerequisites. The next audit must show actual before/after evidence; draft assets are not live improvements.

Measurement, facts and next steps

Confirm before promotional publication

- Conference opening status and capacity: the tourism listing describes a venue under construction, while the website promotes conference facilities.

- Exact resort map pin, address and approved public contact details; current transfer arrangements and breakfast inclusions.

- Current activity operators, meeting points and locations; confirm the viewpoint-trek claim and spa availability. Never promise wildlife sightings.

Restore the evidence chain

- Keyword account: repair authentication, validate supported markets, and record matched-country mobile rank baselines.

- Search-owner account: inspect coverage and the last 90 days of queries, clicks, impressions and landing pages. Public verification-file access alone cannot prove account-side indexing.

- Analytics: verify completed bookings, submitted enquiries, phone clicks and WhatsApp clicks. Tag presence does not prove event delivery or conversion measurement.

- Local profile: confirm manager access, real map pin, current category/hours, genuine photos and an approved booking link. Its absence or verification status was not established.

Growth after the foundation

Use existing articles to support the accommodation and activity pages. Twelve differentiated content briefs are prepared for review. Reconcile them against existing articles before drafting. Refresh overlapping guides using actual query evidence; do not delete useful pages solely because titles are similar.
